Realistic Panel Builder

Realistic Panel Builder

Realistic Panel helps test engineers to make GUI panels easily and quickly for monitoring data and injecting value or failure.

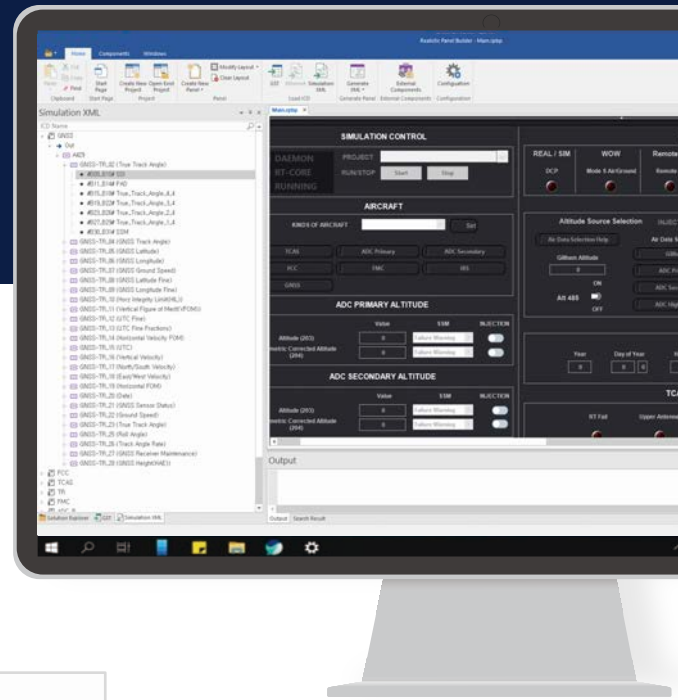

"

**Realistic Panel Builder is
a core software that helps all user to make form and utilize GUI suitable
for every test environment.**

▸ Form GUI easily through positioning component without additional or extra coding

▸ Possible to operate and monitor when simulator is operating, after mapping file defined variable at component

▸ Apply at Realistic Panel Builder through realizing 3rd Party extention component module
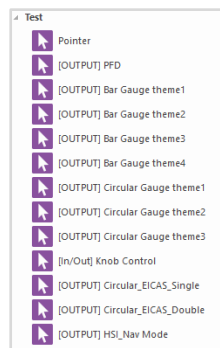

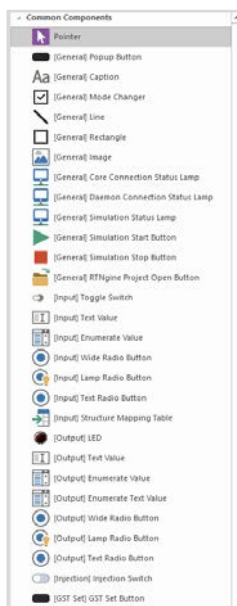

Highlights

- Create and run visualization panel by Panel Designer & Panel Loader
- Project Creation/Load/save
- Easy make flight instrument, gauge, bar and many others
- Mapping Simulation variable to Panel
- Support various user(3rd party) made panel component

Component

- Popup Button
- Text
- Line
- Rectangle
- Image
- Lamp
- Toggle Switch
- Radio Button
- LED
- Flight Display
- Bar Gauge
- Circular Gauge
- Knob Control
- EICAS(Engine Indicating and Crew Alerting System)
- HSI(Horizontal Situation Indicator)

[Sample] **Flight Instrument**

[Sample] **Aircraft Panel**
